0125 DF
Torque Measuring Flange

0225 DF
Dual-range Sensor

Advanced
testing technology
Introduction

The special flange design of torque sensor 0125 DF makes it very suitable for many test rig applications.

Test bed for engines, dynamometer, wheel load simulation, gear boxes, pumps and many others.

General

The torque sensor rotor is fixed to the input shaft using a shrink disk arrangement (part of the delivery). The stator is positioned around the rotor and held by a support (part of the delivery).

Output shafts are connected directly to the measuring side of the sensor. No additional adapters are necessary.

Special features

- Strain gauge principle with non-contact signal transmission
- High accuracy
- Simple excitation, 24 VDC
- ± 5 V output signal of nominal range
- No bearings, maintenance-free
- Short and stiff design
- No additional adaptors needed
- Electronic control of sensor
- Traceable calibration
- CE-certification
- Options: - Speed signal (N)
  - ± 10 V output
  - Frequency output (F)
  - Dual-range, ratio 1:10 of nom. range (Type 0225 DF)

Examples of application

- Gear box test rigs
- Engine test rigs
- Wheel load simulation
- Calibration can be done using a lever arm with locked loading machine

Examples of application

The new dual-range torque sensors from Dr. Staiger Mohilo have been developed to accurately measure high peak torques as well as medium operating torques using only one sensor.

Examples of a high ratio between peak torque and low operating torques are: start-up torques, abrupt stops, alternating torques, torsional vibrations in combustion engines, compressors, presses, pumps, elevators and other machines.

There is often a lack of knowledge about the effect of unexpected peak torques. For safety, a high range sensor can be selected, but now, the measuring signal in normal operation can be too low.

This is the time to use our dual-range sensor.

It is able to measure and withstand high peak torques as well as low operating torques with good accuracy.

Additional advantages of second range

- Inherent overload protection of smaller range because of special design.
- Only one sensor, no additional adaptors are needed.
- Saves handling time.
- Two separately calibrated measuring ranges.

### Pin assignment (0225 DF)

- PIN A (Range selection): Range activation
- PIN C (RS-232 interface): n.c.
- Option A (range selection with optocoupler):
  - PIN 1 = 0 (U_PIN 1.7 = 0 V … 3 V) normal range (1:1)
  - PIN 1 = 1 (U_PIN 1.7 = 3.5 V … 30 V) second range (1:10, 1:5)
- Option C (RS-232 interface):
  - Baudrate 57,600 bps.
  - Up to 1,000 measured values per second.
Advices and Applications

Short effective dimensions

Total length of torque sensor: 
L - T + S (safety)

Example (1.000 Nm): 
122 - 86 + 2 = 38 mm only!

Assembly

Technical Specifications

Mechanical basic data

Overload capacity at operating torque (rupture torque) .................. 2 x rated torque (4 x rated torque)
Max. speed 100; 200 Nm ........................................... 12,000 rpm
Max. speed 500; 1,000; 2,000; 4,000 Nm .......................... 9,000 rpm
Max. speed 10,000; 20,000 Nm ..................................... 4,000 rpm
Distance rotor to stator .................................................. 1.5 mm
Flatness tolerance of the connected flange .......................... 0.01 mm
Radial eccentricity tolerance of the connected flange .............. 0.02 mm
Protection class (mounted) ............................................. IP 54

Electronic specifications

Accuracy class < 3,000 Nm (second range, 0225 DF only) .............. 0.1 (0.2)
Accuracy class > 3,000 Nm (second range, 0225 DF only) ......... 0.2 (0.4)
Linearity error including hysteresis:
related to nominal value ........................................... < ± 0.2 %, optional < ± 0.1 % of nom. value related to second measuring range (0225 DF only) .......................... < ± 0.2 % of nom. value
Repeatability nominal value (second range, 0225 DF only) ........... < ± 0.1 % (< ± 0.2 %) of nom. value
Ratio of second range (0225 DF only) ................................ 1:10
(500 Nm dual-range version is available at the moment, other ranges in preparation)
Limit frequency -3 dB for voltage output .......................... 1 kHz
Voltage output at rated torque ...................................... ± 5 V DC / optional ± 10 V DC / optional serial output RS 232
Temperature influence on the zero point (1:10 range) .............. < ± 0.05 % / 10 K (< ± 0.1 % / 10 K) of nom. value
Temperature influence on nominal value (1:10 range) .............. < ± 0.1 % / 10 K (< ± 0.2 % / 10 K) of nom. value
100 % control input .................................................... 'ON': 3.5 V ... 30 V / 'OFF': 0 V ... 2 V
Load resistance ............................................................ > 10 kÙ
Rated temperature range .............................................. +10 °C ... +60 °C
Operating temperature range ........................................... 0 °C ... +70 °C
Shelf temperature range ............................................. - 25 °C ... +80 °C
Electric connection ..................................................... 12 pin or 7 pin Tuchel built-in plug
Supply voltage ............................................................. 11 V DC ... 30 V DC
Power input ............................................................... approx. 2.5 W

Options

Option A1: Dual-range sensor, rated torque 1:10
Option B1: Output signal ± 10 V
Option B2: Frequency output TTL
Option B3: Frequency output 24 V
Option B4: Frequency output push-pull (± 5 V)
Option C: Increased accuracy
Option D: RS 232 interface

Accessories

- Supply and evaluation unit: VA 3600, acc. data sheet 4160
- Installation-set for easy 19" rack mounting
- Connection cable, length: 5 meters (Part no. 7203)
- Torque sensor with shrink disk
- Mating connector (Part no. 703)
- Certificate of performance (traceable calibration)
- Manual

Example of application:

Engine test rig

Scope of delivery

Example of order specification

0125 DF 2000 - 12733
Torque sensor 0125 DF (nominal torque: 2,000 Nm)

Our torque calibration service offers traceable recalibration of any brands.
